

Armillaria Prescense in Old Growth Redwood Ecosystems

Cameron Tavis

In collaboration with
Phil Van Mantgem - USGS
Chris Lee - CalFire

Background

- ▶ Cussins Plots
 - ▶ Six 1 ha plots in OG redwood near Orick
 - ▶ Established 1995
 - ▶ Remeasured every 5 years
 - ▶ Read Status 1-2 years
 - ▶ Remapped as accurately as possible
- ▶ Variable DBH threshold
 - ▶ Cussins 1 <- 5 cm threshold
 - ▶ All other Cussins plots <- 20 cm threshold

Location of Orick, CA
Credit: Google Earth Pro

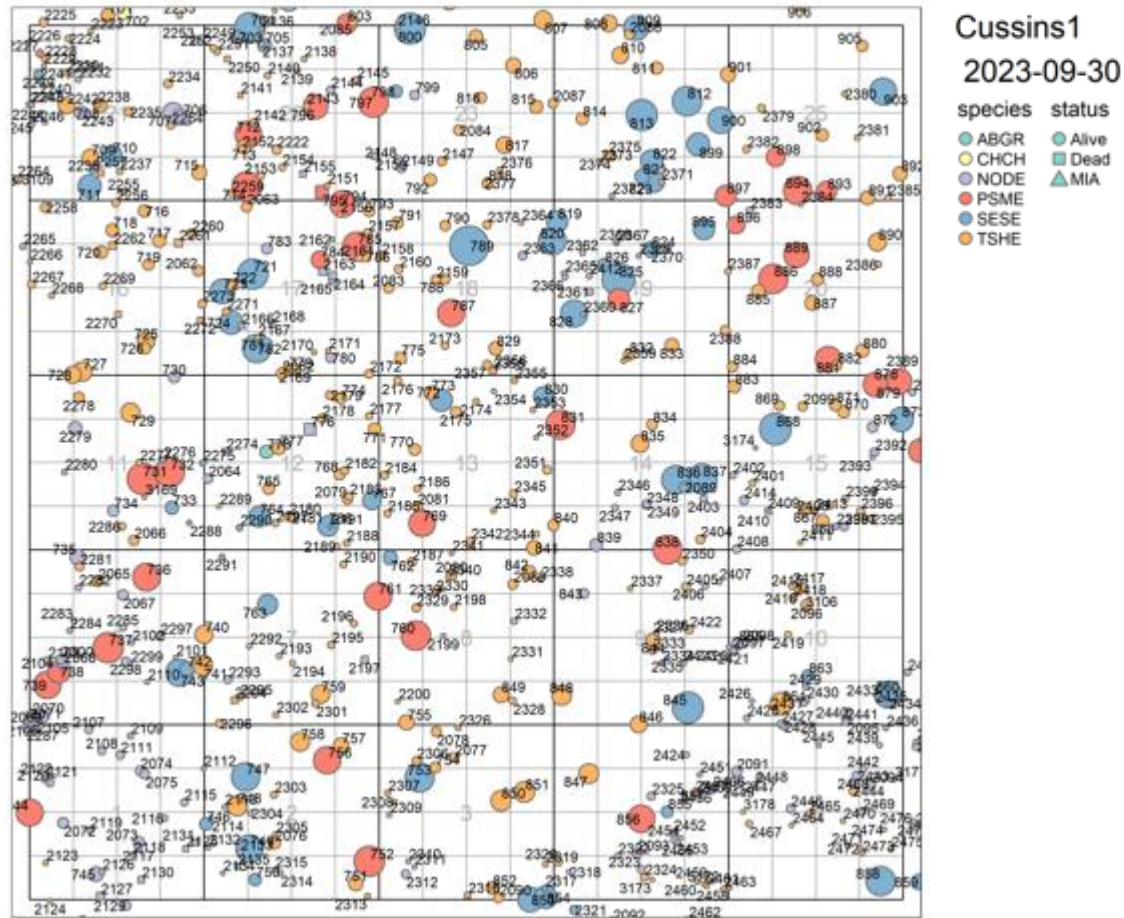

Cussins Plots!

Cussins 3, the largest tree, #1292
clocking in at 470.2 cm in diameter.

Example Stem Map

Cussins 1 Stem Map - By Micah Wright - USGS

All photos were taken on plot on 8/10 and 10/10 by Cameron Tavis

Armillaria Rhizomorphs on TSHE

Armillaria mycelial fans in young PSME

Armillaria Rhizomorphs on another section of TSHE

Armillaria Rhizomorphs on young TSHE roots

Methods

- ▶ Survey of mortality per plot for:
 - ▶ Decay class 1-5
 - ▶ Armillaria Presence Y/N
 - ▶ Failure Type: SS, BS, FRP, PRP

Disclaimer: This information is preliminary and is subject to revision. It is being provided to meet the need for timely best science. Analyses

$$C_i = \sum_j \frac{D_j/D_i}{R_{ij}}$$

Hegyi Competition index standard form where D denotes dbh of target tree i and competitor tree j over distance R.

- ▶ Mortality Tables
 - ▶ Sampling intensity
 - ▶ % occurrence of Armillaria by species
- ▶ Hegyi Competition Index
 - ▶ 6m kernel size
 - ▶ Buffered for edge effects
- ▶ Mapped Armillaria Occurrences
 - ▶ Using 49 subplots, competition per subplot was mapped using the summed Hegyi index for all plots

Subplot Design

Subplot layout

Mortality Table

Mortality Tables by plot and species. Pos. and Neg. refer to positive or negative detections respectively, and % total and % sample are percentage positive detection for the total and sampled mortality

Cussins1	Mortality	Pos.	Neg.	sample intensity	% total	% sample	QMD
NODE	42	17	8	59.52	40.48	68.00	16.88
PSME	2	0	2	100.00	0.00	0.00	127.97
SESE	2	0	2	100.00	0.00	0.00	137.69
TSHE	49	14	22	73.47	28.57	38.89	21.16
Total	95	31	34				
Cussins2	Mortality	Pos.	Neg.	sample intensity	% total	% sample	QMD
PSME	4	0	4	100.00	0.00	0.00	156.78
TSHE	8	6	1	87.50	75.00	85.71	51.36
Total	12	6	5				
Cussins3	Mortality	Pos.	Neg.	sample intensity	% total	% sample	QMD
ABGR	5	5	0	100.00	100.00	100.00	58.72
NODE	2	1	1	100.00	50.00	50.00	45.50
TSHE	3	1	2	100.00	33.33	33.33	29.06
Total	10	7	3				

Cussins4	Mortality	Pos.	Neg.	sample intensity	% total	% sample	QMD
ABGR	6	5	1	100.00	83.33	83.33	59.47
NODE	11	6	2	72.73	54.55	75.00	29.85
TSHE	2	1	1	100.00	50.00	50.00	55.52
Total	19	12	4				
Cussins5	Mortality	Pos.	Neg.	sample intensity	% total	% sample	QMD
NODE	9	5	1	66.67	55.56	83.33	54.82
PSME	1	0	1	100.00	0.00	0.00	136.40
TSHE	1	1	0	100.00	100.00	100.00	25.10
Total	11	6	2				
Cussins6	Mortality	Pos.	Neg.	sample intensity	% total	% sample	QMD
NODE	3	1	0	33.33	33.33	100.00	38.78
PSME	2	0	2	100.00	0.00	0.00	130.32
SESE	2	0	1	50.00	0.00	0.00	62.70

Tree Competition and Mortality: Cussins1

Tree Competition and Mortality: Cussins2

Tree Competition and Mortality: Cussins5

Tree Competition and Mortality: Cussins3

Tree Competition and Mortality: Cussins4

Tree Competition and Mortality: Cussins6

Subplots plotted by color according to summed Hegyi Index. Armillaria Positive Mortality is overlaid as the green x's

Discussion

- ▶ Limitations for sampling imposed by Cussins project goals
- ▶ Need for Armillaria baits in the future
- ▶ Other methods of determining competition (SDI?, BA/plot, Tree Count, etc.)
- ▶ DBH threshold influences comp.
- ▶ Chi square tests for armillaria occurrences according to Decay, Species and Hegyi index.

The background features abstract, overlapping geometric shapes in various shades of green, ranging from light lime to dark forest green. These shapes are primarily located on the left and right sides of the frame, leaving a large white central area. The shapes are composed of triangles and polygons, some of which are semi-transparent, creating a layered effect.
